

Salesforce vs Custom CRM — side-by-side comparison

Purpose: paste screenshots side by side later to compare our Salesforce reference org (“Quandatics Sales”, connect-momentum-5641.lightning.force.com) against the custom CRM (crm-v2). The **Salesforce** column is filled from the captured spec (SPEC.md) plus a screenshot placeholder. The **Custom CRM** column is a **placeholder** — paste the crm-v2 screenshot and notes there later.

How to use: for each object, drop the Salesforce screenshot in the left placeholder and the crm-v2 screenshot in the right placeholder, then tick off differences under each row. Status key: (done) re-layout applied · (partial) partial · (to build) to build.
